Figure 1 is a graph showing the relationship between the number of amino acid residues (NM) from the N-terminus to the Thr195 residue (THR) and the molecular weight (MW) of the protein. The x-axis represents NM to THR (0 to 13.5) and the y-axis represents MW (kDa) (0 to 3000). A solid line shows the theoretical MW, and a dashed line shows the experimental MW. Key points on the graph include YTE, SC952 (SDF) (LNAV), YASYO (FAF), SC951 (SDF), and GINZA (IF). The experimental MW is shown as a shaded area, and the theoretical MW is shown as a solid line. The graph indicates that the protein is a dimer, with the experimental MW being approximately 195 kDa and the theoretical MW being approximately 2000 kDa.
